

Kickstarting AgentVault's First 50 Users

Business Development Intern

1. Target User Segments

Segment A: Active Retail Crypto Traders (Spot & Perp Traders)

Why them: They trade frequently, already pay for tools (TradingView, Telegram signal groups, bot subscriptions), and are the fastest segment to convert into a paying or highly engaged early user because the product maps directly onto something they do every day.

Pain point AgentVault solves: Retail traders lose money and time to emotional decisions, missed entries/exits, and juggling multiple charts and news feeds. An AI trading assistant that can watch the market, flag setups, and execute or suggest trades removes the manual monitoring burden and reduces impulsive mistakes.

Where to find them: Crypto Twitter/X (trader threads, #cryptotwitter), Telegram trading and signal groups, Discord servers for exchanges like Binance/Bybit communities, r/CryptoCurrency and r/algotrading, and trading-focused YouTube/TikTok comment sections.

Segment B: DeFi Power Users & Small DAO Treasury Managers

Why them: They manage larger, multi-asset portfolios (personal or DAO treasury funds), are highly Web3-native, and have real incentive to automate monitoring since they are responsible for other people's money or a shared treasury — making them vocal advocates if the tool works.

Pain point AgentVault solves: Treasury managers manually track positions across multiple wallets, protocols, and chains, and often react late to market moves or liquidation risk. AgentVault can act as an always-on co-pilot that monitors positions and surfaces risk/opportunity signals in real time, saving hours of manual tracking.

Where to find them: DAO governance forums (Snapshot, Discourse boards of major DAOs), DeFi-focused Discord servers, Twitter/X accounts of treasury multisig signers, and communities like Bankless, DeFi Llama's Discord, and Gitcoin/DAO ops groups.

2. Outreach Example

Channel: X (Twitter) DM — targeting Segment A (Active Retail Crypto Traders)

Hey [Name] — saw your thread on getting stopped out during the ETH move last week, rough one.

I'm working on AgentVault, an AI trading assistant that watches your charts and open positions 24/7 and flags setups/risk in plain language, so you're not eyeballing five tabs at 2am.

We're onboarding a small group of active traders for early access before public launch. No cost, just looking for real feedback from people who actually trade daily.

Worth a 10-min look? Happy to send a quick demo link either way.

Channel: Discord (direct message, more casual tone) — targeting Segment B

Hey! I noticed you're active in [DAO name]'s treasury discussions.

Quick one — we're building AgentVault, an AI assistant that keeps an eye on multi-wallet/multi-chain positions and pings you on risk or opportunity signals, so treasury tracking isn't a manual spreadsheet job.

We're inviting a handful of DAO treasury folks to try it early and shape the roadmap. Would you be open to a quick look or intro call this week?

3. GTM Ideas to Reach the First 50 Users

Idea 1: "Trade Call It" Prediction Challenge on Twitter/X

Run a lightweight, week-long challenge where participants use AgentVault to make a public price/trend call, tag AgentVault, and use a branded hashtag. Best calls (or most engaging threads) win a small prize (merch, a bit of USDC, or free premium access). Low cost, generates organic content, and naturally demonstrates the product in use.

Idea 2: University Blockchain Club Beta Partnerships

Reach out directly to 10–15 university blockchain/fintech clubs and offer their members exclusive early access plus a short live demo/AMA. Student investors are curious, active on Discord, and likely to share access with peers, giving a natural referral loop at near-zero cost.

Idea 3: "Build in Public" DAO Treasury Case Study

Partner with one small, friendly DAO willing to let AgentVault publicly track and report on their treasury performance for 2–4 weeks (with permission). Publish the results as a short case study/thread. This builds credibility with the DAO/DeFi segment and gives a concrete, provable use case to point new prospects to instead of just claims.
